### Other Site Characteristics

Área de relieve alomado constituida por un mosaico de vegetación natural, cultivos de secano y cultivos de regadío, drenado por una interesante red de ramblas y barrancos. Situada en un contexto marcadamente semiárido, las formaciones vegetales albergan magníficos pinares naturales de pino carrasco (*pinus halepensis*) acompañados por un coscojar con lentisco y palmito en buen estado de conservación. También son de destacar los tomillares y los prados anuales, ricos en especies endémicas y de interés. Los cauces de ríos y ramblas albergan también formaciones destacables, como los tarayares. En cuanto a las especies, debe destacarse por su relevancia la población de *Hieraaetus fasciatus* y, en menor medida, de *Aquila chrysaetos*, que tienen en esta zona una importante área de dispersión valenciana de los ejemplares inmaduros.

## 4.2 Quality and importance

Alberga poblaciones nidificantes de 12 especies de aves incluidas en el Anexo I de la Directiva 79/409/CEE. La zona es de especial importancia como área de dispersión para el Águila-azor Perdicera y Águila Real. La densidad de parejas reproductoras de Búho Real es muy elevada. Nidifican también el Halcón Peregrino, Culebrera Europea y Aguillilla Calzada. Los rangos de las poblaciones de aves reflejadas en el apartado 3.2 muestran los contingentes mínimos y máximos registrados en el periodo 2003-2008, elaborados a partir de censos oficiales.
